# Bojan Ludajić

bojan.ludajic@gmail.com | github.com/bojanludajic | +381 69 200 3217 | Novi Sad, Serbia

#### Education

## Faculty of Sciences, University of Novi Sad

BSc in Information Technologies

2022 - 2026

# Personal Projects

#### IP address storage program |C| Link

- C program for storing and viewing available IP addresses.
- Implemented a Trie data structure for efficient storage and prefix-based lookups of IPv4 addresses.
- Added support for CIDR (slash) notation, which enables subnet-based address search and retrieval.

## Compose Desktop UI Code Generator | Kotlin, Compose Desktop, KotlinPoet | Link

- Tool for creating and exporting navigation graphs with an intuitive graphical user interface.
- Utilized Kotlin/Compose and KotlinPoet for automatic code generation, simplifying the process of transitioning from visual design to functional code.

### Android Word Guessing App | Kotlin, Jetpack Compose | Link

- Dynamic native Android app inspired by Wordle created using Kotlin/Jetpack Compose.
- Implemented features include real-time word guessing, an on-screen keyboard, and a dark mode toggle to enhance user engagement and application functionality.

#### **Property Management App** | Java, Hibernate, Swing | Link

- Mini full-stack CRUD app made for university course Databases 2.
- The application allows for the addition and deletion of owners and properties, with functionality for viewing property details associated with specific owners.

#### Skills

Programming: Java, Kotlin, Jetpack Compose, Hibernate, JavaFX

Database management: SQL, Oracle SQL, MySQL

Tools: Git, Gradle, IntelliJ Idea, Eclipse (EE), Android Studio, Visual Paradigm

#### Languages

Serbian - native

English - fluent

German - intermediate
